About the Conference

Software development is fundamental to information age. Quality Assurance and Software Development has progressed from first generation of software when program instructions were written directly in binary code to an era of the modern high-level languages to develop mobile phone software, sensors and highly efficient software like multimedia visualization, web application, big data analysis and data mining. Besides the development of modern day software technology are use of multiprogramming and multiuser systems, embedded system softwares, expert systems, artificial neural networks efficient principles to economically build functional and reliable software have made this very important for academics and research. The objective of the conference is to provide an opportunity to the students, researchers and faculty members of computer science and allied areas about the latest developments, innovations, recent tools and techniques, algorithms, system designs in the advanced field of computer science.
